

This Coromandel Native Nursery fact sheet is a guide only .

Dianella tasmanica "Tas Red"

Description; Ornamental flax lily with beautiful contrasting foliage colour. This drought and frost tolerant plant, finally gives designers a native flax that changes colour throughout the seasons. *Dianella tasmanica* is a hardy plant, and Tas Red will make a great native alternative to New Zealand flax.

Grows to; Height 40cm spread 40cm.

Foliage; Summer; Generally has a green colour. Autumn; usually green, with some yellow tones, and red base. Winter; Green with yellow tones, and red margins and red base. Often whole leaves, have red tones. Spring; yellow tones, with some green and a red base.

The foliage colour change can be influenced by fertilizer, soil type, and temperature variation. Blue flowers in spring followed by purple berries.

Position; Tolerates a wide range of soils and climactic conditions .Suited to full sun as well as shady positions. Very hardy, exhibiting excellent drought and frost tolerance.

Maintenance; Fertilize with slow release fertilizer once a year in spring. Trim older leaves as required.
