

This Coromandel Native Nursery fact sheet is a guide only .

Westringia Fruticosa

Known as ; Native Rosemary.

Size; Grows to 2 meters

Origin; Usually found growing in exposed coastal habitats such as cliffs and headlands.

Description; Dark green small leaves with beautiful small star shaped white flowers for most of the year.

Position ;A very salt tolerant, frost resistant plant. Often mass planted and used very effectively as a clipped hedge. It also makes a great small screening plant that will accept full sun or part shade and can be pruned to shape. Accepts a very wide range of soil types. Little water needed once established.

Maintenance; A light shaping prune when required to keep shape. Slow release fertilizer in Spring.
