

Poa poiformis "Kingsdale"

Description; A clump forming perennial.

Grows to; 45cm- Width 45cm.

Foliage; Kingsdale features attractive, fine, deep green, and strap like leaves.

Position; Tolerates a wide range of soils and climatic requirements. Suited to full sun, as well as shady positions. Very hardy, exhibiting excellent drought and frost tolerance.

Low Maintenance; Little or no maintenance required. Fertilize with slow release fertilizer to keep leaves deep blue colour. Water well until established. Trim annually in autumn or late winter for peak performance.

Comments; Kingsdale has fine blue arching leaves which add softness and stunning colour to any garden design. It is great for colour contrast when mass planted or can be used as an effective border. Kingsdale also performs well on sloping sites that require erosion control.
